

Large Facility Case Study

NICE Systems Works for Citicorp Aircraft Facility

Client: Citicorp Aircraft Facility
PSA Member: Integrated Security Systems (ISS)
PSA Vendor: NICE Systems

Situation:

The client, who is one of many Fortune 500 corporate jet facilities in this location, which accesses the Westchester Airport, was implementing a total hanger upgrade to include security and fire/life safety equipment and systems. Due to a large inventory of corporate aircraft assets the need for a digital video surveillance system was assessed. A Design and Build Contract was awarded to PSA member Integrated Security Systems (ISS).

Client Requirements:

The client requested improvement in overall site management of the CCTV system, to include:

- ✓ The capability to record superior quality video.

- ✓ Ability to retrieve data by time and date.
- ✓ Access to video data via Advanced Corporate Network using existing IT platform.
- ✓ Substantial recording and storage capacity.

The customer was given product demonstrations and concluded that the quality of the NiceVision® system was superior to other products selected for review. NICE Systems was also chosen for its respected reputation within the industry.

A Stronger Security Tool:

“We were able to provide the customer with an enhanced CCTV system that more than fulfilled their requirements,” states John Colley, president of Integrated Security Systems. “Using digital technology provides a stronger security tool and it’s simpler to manage and maintain. It is a win-win solution for everyone involved.”

Benefits Summary:

The immediate benefits of converting CCTV surveillance systems from an analog to a digital format are improved quality and reliability. The new system also provides simplified system administration and maintenance.

- ✓ The product is scalable to grow with the customer.
- ✓ Any system problems can be immediately e-mailed to authorized personnel.
- ✓ Audio options are available to add to the system.
- ✓ Object based video motion detection is available.
- ✓ Audit trail for tracking user’s system management activities is accessible.
