Coronavirus Notification

George Risk Industries, Inc. (GRI) implemented and has been following the CDC guidelines and safety measures since the outbreak. Our products are manufactured at our facilities in Kimball & Gering, Nebraska.

Normally GRI has on hand six months to a year's worth of raw materials. So far, we have not been impacted by material shortages.

We made it through the first round virtually unscathed by the virus. The second round that started this fall and is continuing through the winter has had an impact on our production lines and office personnel to varying degrees.

Due to a large increase in orders, combined with COVID-19, we are experiencing long delays on several of our production lines. When possible, please forecast any product demands and place orders as soon as you can.

We are working hard every day to provide the quality GRI and Labor Saving Device's products that you can depend on.

Stay safe. Be well.

American Made Quality You Can Trust!
